

NewTools

a novel food product scoring system with summary scores for nutrition
and sustainability (environmental and social)

Project structure

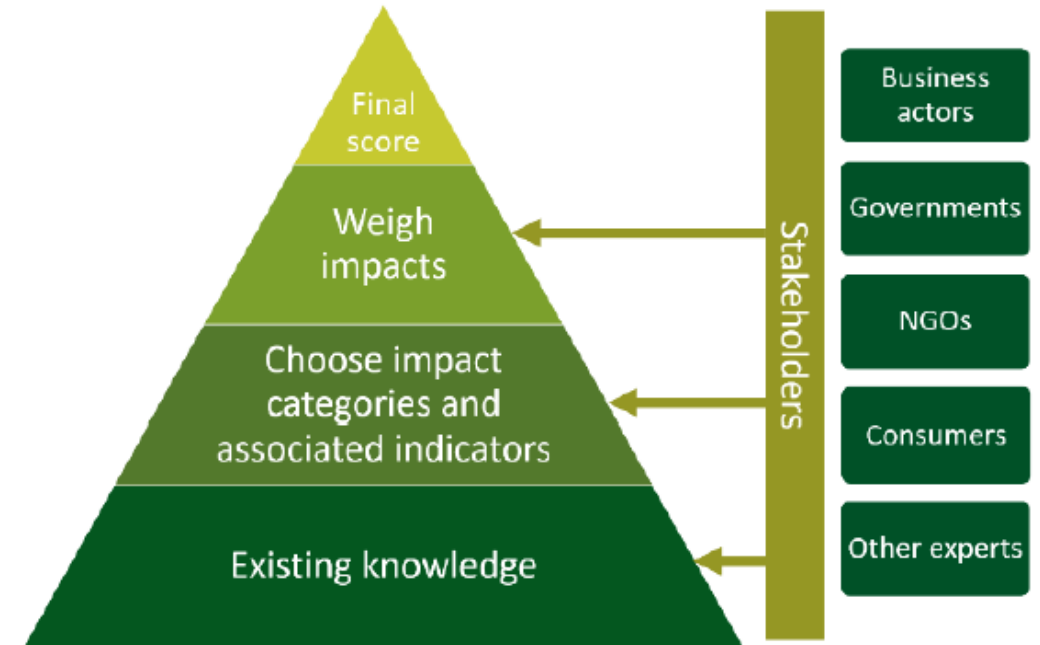

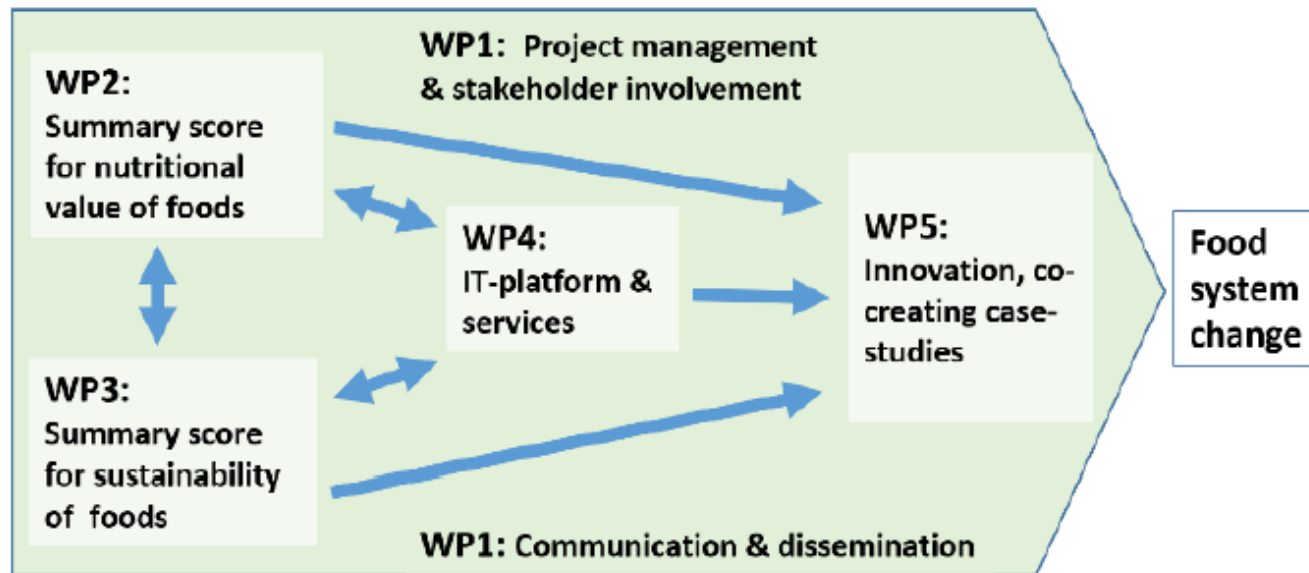

Figure 3: The process for developing a scoring system for environmental and social sustainability in WP3, and the involvement of the stakeholders.

Mix of qualitative, quantitative and semi-quantitative indicators

Starting point in Norwegian production, but must also include production in other countries

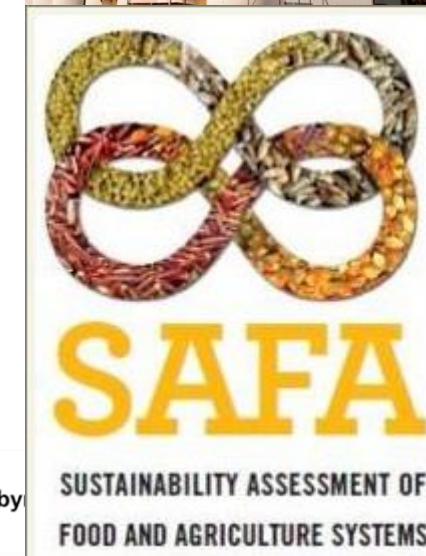

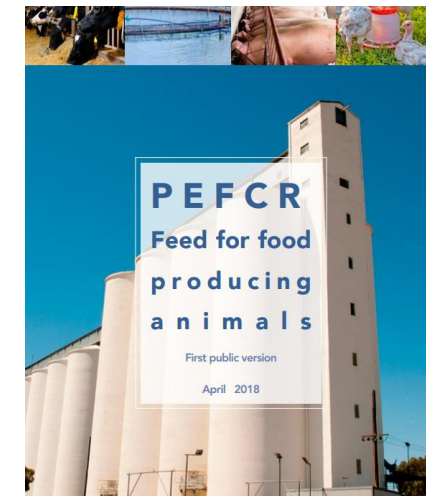

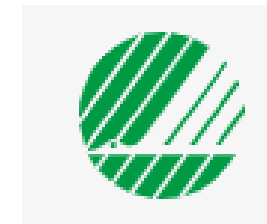

Weighting involves consideration of many interests

Important aspects

Reality check

- Labelling systems in Norway and abroad
- Methods for sustainability assessments (LCA, PEF, SAFA...)
- Other relevant systems

Examples.....

Activities to date

- Literature study
 - “Mind the gap”
 - What challenges shall Norwegian food production solve?
 - What is missing in today's methods and frameworks?
- Reflections from RISE and Wageningen
- Involving stakeholders- questionnaire of choice of impact categories and indicators for environmental and social sustainability

Multivariate analysis

- Correlations between indicators
- Reduce data needs
- Avoid double counting of impacts

Scaling - multicriteria assessment

- Collect several impacts in one score
